- Detailed design of the Dunkettle Interchange Upgrade continues in consultation with the many stakeholders impacted by the project.
- The ongoing design includes a major upgrade of the OHVD (OverHeight Vehicle Detection) system on the approaches to the Jack Lynch Tunnel. Overheight vehicles pose a significant risk to the operation of all tunnels. Detecting such vehicles on all of the freeflow approaches in the upgraded interchange, and allowing for their removal from the road network is a

challenge. We are working with design specialists in this area and working closely with the tunnel operators to develop a robust system.

- Works continue to remove all invasive plant species from the Dunkettle site.

As always, if there are any queries or comments in relation to the Dunkettle works, please contact us at;
